

Profit Pulse Ally CRM — Developer Handover Document

Purpose: Give a developer full understanding of how this CRM works — front and back — so they can make precise recommendations on improving the system and UI.

Author: Adam (OpenClaw assistant) · **Date:** 2026-09-01 · **App:** <https://crm-ppa-nine.vercel.app>

1. System Overview

The CRM is the operational hub for **Profit Pulse Ally** — a financial advisory business (insurance/wealth). It manages:

- **Leads** (inbound from multiple channels) → **clients** through a sales pipeline
- **Client 360° records** — contacts, deals, tasks, interactions, important dates, documents, strategy plans
- **Strategy planning** — per-client financial strategy plans with steps, expenses, and income projections
- **Commission tracking** — deal participants, commission splits, returnables, reconciliation
- **Product recommendations** — an AI-assisted engine (questionnaire → traits → ranked product shortlist)
- **Team management** — users with roles (SUPER_ADMIN / STANDARD_USER), assignments, leaderboards

The product serves two audiences:

- **Super admins** (the owner): full pipeline, all leads, analytics, revenue, leaderboards, user management, reconciliation
- **Standard users** (relationship officers): their assigned clients, tasks, deals, commission, statements

2. Technology Stack

Layer	Technology
Framework	Next.js 15 (App Router, React Server Components + Client Components)
Language	TypeScript
Database	PostgreSQL via Supabase (pooler: port 6543 transaction mode; DIRECT_URL 5432 session mode for migrations/transactions)
ORM	Prisma 6 (28 models)
Auth	Supabase Auth (email/password) + app JWT (<code>lib/jwt.ts</code>) + NextAuth cookie scaffolding
Middleware	<code>src/middleware.ts</code> — route protection + redirects
Hosting	Vercel (project <code>crm-ppa</code> , production alias <code>crm-ppa-nine.vercel.app</code>)
Git	GitHub <code>priskn/CRM_PPA</code> , branch deploy (deploy-on-push to Vercel)
Styling	Tailwind CSS + custom UI primitives (<code>src/components/ui/</code>)
Docs	<code>docs/</code> (<code>DATABASE_AND_UI_REFERENCE.md</code> is the 218KB reference)

3. Sources of Truth (read these first)

1. `prisma/schema.prisma` — the complete data model (28 models). This is the ground truth for all data.
2. `docs/DATABASE_AND_UI_REFERENCE.md` (218KB) — exhaustive API + data reference generated from the codebase. The single best deep-dive.
3. `docs/BACKGROUND_JOBS_OPS.md` — background job processor ops (must be scheduled in prod).
4. `src/app/api/**` — every API route (see §7).
5. `lib/**` (62 modules) — business logic, auth, access checks, commission calcs, strategy, recommendation engine.
6. `src/components/**` — UI components (workspace shell, widgets, modals).
7. `.env` — Supabase URL/keys, DATABASE_URL (6543 pgbouncer), DIRECT_URL (5432), NEXTAUTH_SECRET, CRON_SECRET.

4. Authentication & Authorization

Flow

- Login page → `supabase.auth.signInWithPassword` → session stored in `cookie sb-<ref>-auth-token` (Supabase) + `localStorage token` (app JWT).
- `src/middleware.ts` runs on `/`, `/dashboard*`, `/admin*`, `/my-statements`, `/clients*`, `/login`, `/signup`:
 - No session + protected path → redirect `/login`
 - Session + `/login` → redirect `/dashboard`
- Server-side auth: `getAuthenticatedUserFromRequest(request)` in `lib/authHelpers.ts` — resolves **Bearer JWT** OR **session cookie**, then looks up the `User` row and checks `ACTIVE` status.
- Client-side auth: `src/hooks/useUserProfile.ts` → `supabase.auth.getUser()` → profile fetch.

Roles & permissions

- `UserRole` enum: **SUPER_ADMIN** and **STANDARD_USER**.
- Permission helpers in `lib/`:
 - `canReadClientCore(userId, role, clientId)` — core read gate
 - `resolveClient360PageAccess(...)` — granular per-page access (deal access, hierarchy, strategy)
 - `clientStrategyPermissions`, `importantDatePermissions`, `leadDuplicates`, `pipelinePermissions`
- **Data isolation**: standard users see only their **assigned clients** (`ClientAssignment` rows); super admins see everything.

5. Data Model (28 tables — key ones)

Model	Purpose
User	Staff accounts (role, status ACTIVE/DEACTIVATED)
Client	Leads AND clients (single table; <code>status</code> = pipeline stage). Has <code>profileTraits</code> (JSON, recommendation traits) + <code>recommendedProducts</code> (JSON, curated shortlist)
ClientContact	Emails/phones (normalized, deduped)
ClientImportantDate	Calendar events per client (label, scheduledAt, all-day flag)
ClientAssignment	Which users own which clients
Interaction	Activity log entries (notes)
Deal	Sales deals per client (value, type, status)
DealParticipant	Who shares the deal + commission %/amount
CommissionReturnable	Returnable commission tracking
Strategy	Legacy strategy docs
ClientStrategyPlan	Structured per-client strategy plans (goal, expected outcome, owner)
ClientStrategyStep	Steps within a plan (linked deals, amounts, income expectations, timeline)
ClientStrategyExpense	Expenses per plan
ClientStrategyProjectionMilestone (+Step/Expense)	Income projection timelines
Task	To-dos per client
Tag / ClientTag	Tagging (many-to-many)
ClientSourceRecord	Inbound lead provenance (source, externalId, payload)
LeadMergeAudit	Merge history for dedupe
BackgroundJob	Async job queue (processed by cron or manual)
Notification, ClientDocument, Document, ClientActivityLog, ActivityReadStatus	Supporting tables

6. Architecture Patterns

- **Route handlers** (`src/app/api/**/route.ts`) — every mutation is an authenticated API call.
 - **RSC (React Server Components)** for initial page data (e.g., `Client360Page` fetches core data server-side), then **client components** take over for interactivity.
 - **Widget pattern:** `Client360PageClient` composes widgets (details, deals, team, hierarchy, source records, recommended products) in a sidebar + workspace panel.
 - **WorkspacePanel tabs:** Strategy & Tasks · Strategy Planner · Activity & Notes · **Product Recommendations** — each tab lazy-loads its own data (API only on mount).
 - **Performance discipline:** heavy views (pipeline kanban, calendars, charts) are lazy-mounted per `?view=`; Home fetches only cached KPIs. `lib/performance.ts` wraps queries with timing.
 - **Auth propagation:** `lib/authenticatedFetch.ts` attaches the token to client-side API calls.
 - **Background jobs:** `lib/backgroundJobs.ts` + `/api/tasks/process-background-jobs` (CRON_SECRET guarded). Used for async work (sheet sync etc.).
 - **Integrations webhooks:** Google Forms, Profit Pulse Ally, LeadGen (n8n → CRM) — all POST leads into `Client` with source provenance.
-

7. API Surface (grouped)

Auth: `/api/auth/token`, `/api/auth/register`, `/api/auth/[...nextauth]`

Dashboard:

- `/api/get-dashboard-data`
- `/api/dashboard/standard`, `/api/dashboard/superadmin`
- `/api/dashboard/widgets/*` (activity-feed, assigned-clients, deal-participation, important-dates-calendar, open-tasks, performance-metrics)

Clients (360°):

- `/api/clients`, `/api/clients/[id]` (GET/PATCH)
- `/api/clients/[id]/details`, `/archive`, `/assignments`, `/assignments/[id]`
- `/api/clients/[id]/deals` + `[dealId]` + `/participant-users`
- `/api/clients/[id]/interactions` + `[interactionId]`
- `/api/clients/[id]/important-dates` + `[dateId]`
- `/api/clients/[id]/tasks` + `[taskId]`
- `/api/clients/[id]/documents` + `[documentId]`
- `/api/clients/[id]/employees`, `/follow-up`, `/quick-note`, `/source-records`, `/workspace`
- `/api/clients/[id]/tags/[tagId]`

Strategy:

- `/api/clients/[id]/strategy`, `/strategy-plans` + `[planId]` (+ steps, connections, expenses, projection-milestones, reorder)

Recommendations (AI):

- `/api/clients/[id]/profile-traits` (GET/PUT — trait picker)
- `/api/clients/[id]/recommendations` (GET — diverse top-5 + comparisons + stars)
- `/api/clients/[id]/recommended-products` (GET/PUT — curated shortlist)
- `/api/products`, `/api/products/[slug]/matching-clients` (reverse targeting)

Admin:

- `/api/admin/pipeline`, `/leads` (+bulk-*, duplicates, merge), `/dashboard-kpis`, `/funnel-data`, `/revenue-tracker`, `/leaderboards`, `/tags`, `/users`, `/all-commission-returnable`

Leads: `/api/leads/[id]/important-dates*`

Reports: `/api/reports/funnel`, `/leaderboards`, `/revenue`

Search: `/api/search/clients`

Me: `/api/me/assignments`, `/api/me/commission-returnable`

Integrations: `/api/integrations/google-forms/leads`, `/profit-pulse-ally/members`, `/leadgen/leads`

Jobs: `/api/tasks/process-background-jobs`, `/tasks/recalculate-returnables`, `/tasks/[taskId]/complete`

Misc: `/api/notifications*`, `/api/commission-returnable/[id]`, `/api/user/profile`, `/api/users/[id]*`, `/api/activity*`, `/api/perf/client360-workspace-auth-only`

8. Feature Walkthrough (with screenshots)

8.1 Login (/login)

A screenshot of a login form on a light blue background. The form is a white rounded rectangle with a logo at the top, a title 'Welcome back', a subtitle 'Sign in to your CRM account', and input fields for 'Email' (containing 'you@example.com') and 'Password' (containing seven dots). A blue 'Sign in' button is below the password field, and a link 'Sign up' is at the bottom right. A small circular logo with the letter 'N' is in the bottom left corner of the page.

Welcome back

Sign in to your CRM account

Email

you@example.com

Password

[Sign in](#)

Don't have an account? [Sign up](#)

Supabase email/password. On success, writes the Supabase session cookie + app JWT token. Signup route exists but is typically disabled for public use.

9. The Product Recommendation Engine (built 2026-08-31)

- **Data** (`lib/data/`): `product-personas.json` (89 products × features/audience/personas/signals/price_tier/product_fit), `personas.json` (15 HK-market personas with signal vocab), `trait-vocabulary.json` (112 pickable traits in 7 groups), `trait-questionnaire.json` (18 questions → trait mapping).
 - **Scoring** (`lib/recommendationEngine.ts`): signal hit ×2.0 + persona overlap ×1.0 + price-tier sensitivity (±1.5); emotional categories (savings/investment/retirement/ILAS) get relaxed soft-signal bonuses.
 - **Diversity**: `scoreClientDiverse` returns top-N with one product per category.
 - **Comparison**: `compareCategory` + `suitabilityStars` (score → 1-5★) shown in the compare panel.
 - **Reverse**: `matchClientsForProduct` + `/api/products/[slug]/matching-clients` — product → best-fit clients.
 - **UI**: questionnaire → traits → recommendations all inside the client Workspace tab; curated shortlist widget in the sidebar (`recommended-products` PUT).
-

10. Known Areas for Improvement (candidate list — verify before acting)

1. **Data freshness**: `lib/data/*.json` (products/personas) are copied from the research pipeline — need a sync script or shared source.
 2. **Background job scheduler**: README says production must schedule the processor every 1–5 min; verify it's actually scheduled (Vercel cron / external) — earlier absence caused stale lead-sync behavior.
 3. **Connection pool**: session-mode pooler caps at 15 connections; `connection_limit=2` is set per instance — monitor for exhaustion under load.
 4. **Client 360 payload**: the page loads core + deals + hierarchy server-side — consider streaming or splitting for large datasets.
 5. **Recommendation engine weights** are simple (2.0/1.0) — calibrate against real sales outcomes.
 6. **UI density**: display density toggle exists (compact/comfortable) — audit default for different roles.
 7. **Search**: `/api/search/clients` relies on `pg_trgm` indexes (created via raw SQL, not in `schema.prisma`) — any Prisma migration must NOT drop them (see `20260721020000_add_performance_indexes_phase_3`).

11. How to Run Locally

```
cd ~/Crm\ PPA\ Ci
npm install
# .env needs: SUPABASE_URL, SUPABASE_ANON_KEY, SUPABASE_SECRET_KEY, DATABASE_URL (6543), DIRECT_URL (5432), NEXTAUTH_SECRET, I
npm run dev      # dev server on :3000 (runs prisma generate first)
npm run build    # prisma generate && prisma migrate deploy && next build
npm run start    # prod build
```

Deploy: push to `deploy` branch → Vercel auto-builds. `vercel deploy --prod --yes` for manual.

Test scripts: `scripts/test-*.ts` cover lead ingestion, admin pipeline, client access, strategy projection, deal participants, etc.
