

Profit Pulse Ally CRM

Super Admin Manual

Version: 1.3 · **Audience:** Super administrators

1. Introduction

Super admins have full organizational visibility and control: analytics, master pipeline, Lead Command Center, user management, commission reconciliation, client archive/delete, team assignments, duplicate merge, and unrestricted pipeline changes.

This manual covers super-admin-specific features. For standard assignee workflows (dashboard widgets, role-based pipeline rules, My Statements), see the **Standard User Manual**.

2. Getting started

Sign in

1. Open the CRM login page.
2. Enter email and password.
3. Click **Sign in**.

A fresh JWT is issued on login for API access.

Your home screens

Route	Purpose
<code>/admin</code>	Admin Dashboard—org-wide analytics and master pipeline
<code>/admin/leads</code>	Lead Command Center—inbox, triage, duplicates, merge
<code>/admin/users</code>	User management
<code>/admin/reconciliation</code>	Global commission returnable audit
<code>/dashboard</code>	Personal dashboard (optional)

Sign out

Use **Sign Out** in any admin header.

3. Super admin capabilities

Capability	Standard user	Super admin
Admin dashboard & analytics	✗	✓
Lead Command Center	✗	✓
User management	✗	✓
Global reconciliation	✗	✓
Add lead from dashboard	✓	✗ *
Add lead/client from admin	✗	✓
Set any pipeline stage	✗	✓
Manage team assignments	✗	✓
Archive / delete client	✗	✓
Bulk lead operations	✗	✓
Merge duplicate clients	✗	✓
Merge selected leads (2–10)	✗	✓
Command palette—all clients	✗	✓

*Use **+ Add Lead / Client** on the Admin Dashboard instead.

Lead creation (admin)

1. Admin Dashboard → **+ Add Lead / Client**.
 2. Enter client details; optionally set initial pipeline stage.
 3. Submit—**no auto-assignment**; assign team manually on Client 360.
-

4. Admin dashboard

Route: `/admin`

Header actions

- **+ Add Lead / Client**
- **Lead Command Center**
- Back to standard dashboard, Account Settings, Sign Out

Sections

Section	Purpose	Export
KPI bar	Committed revenue, potential revenue, commission YTD, pipeline velocity, active deals	—
Company earnings	PPA (COMPANY) share from won deals with participant rows; legacy 20% fallback when no participants	—
Conversion funnel	Count per stage + conversion rates	PDF / CSV
Revenue tracker	Revenue and profit over time	PDF / CSV
Leaderboards	Top performers by commission and deals closed	PDF / CSV
Recent activity	Org-wide activity feed (~100 items)	—
Master pipeline	Kanban (desktop) / list (mobile); filter by status and assignee	—

Click any pipeline card to open **Client 360**.

Analytics (funnel, KPIs, revenue, leaderboards) are cached ~10 minutes. Pipeline and activity are live.

5. Lead Command Center

Route: `/admin/leads`

Triage leads, fix data quality, run bulk operations, and merge duplicates.

Tabs

Tab	Purpose
Inbox	Compact lead table with attention scoring
Duplicates	Email/phone duplicate groups with pairwise merge

Cleaner inbox layout

The inbox uses a **compact** layout so you can scan more leads at once:

- **Display density** — toolbar toggle **Compact** / **Comfortable** (also in Account Settings). Preference is saved in your browser.
- **Dense rows** — status, sources, and tags show as small pills (up to two visible, then **+N** for more). Long text is truncated; blank fields show **—**.
- **Primary row action** — **Preview** opens the side drawer. Open Client 360 from inside the drawer.

Inbox presets

Quick preset buttons above the table apply common filter combinations (toggle on/off):

Preset	What it shows
Attention	Leads flagged as needing attention
New	New Lead stage
Unassigned	No relationship owner
Duplicates	Possible duplicate email or phone
Follow-up	Overdue or due-today follow-ups

Leads still sort by **attention score** (higher = needs action sooner) unless you change filters.

Search and advanced filters

- **Search** (always visible): name, company, email, phone, lead source
- **Filters** button — opens the **advanced filters** panel (collapsed by default):

Control	Options
Status	All active stages or a specific stage (including Archived)
Assignee	Filter by relationship owner
Tags	Filter by one or more tags
Date range	Created or last-modified window
Filter chips	Needs attention · Missing phone · Missing email · Unassigned · Duplicate email · Duplicate phone · Overdue · Due today · No next action · Google Forms · Profit Pulse Ally

Inbox columns

Name/Company · Status · Sources · Tags · Contact · Owner · Follow-up · Last activity · Attention · Actions

Bulk actions (checkboxes → bottom bar)

Action	Notes
Merge selected	2–10 leads; see §6
Add tags	Existing tags or create new inline
Assign relationship	Skips clients that already have a relationship owner
Change status	Bulk pipeline update
Add bulk note	System note on all selected

Merge selected is disabled when fewer than 2 or more than 10 leads are selected.

Preview drawer

Click **Preview** on a row (or tap a mobile card) to open the drawer without leaving the inbox.

Section	Contents
Summary	Name, status, priority, owner; Open Client 360 ; optional Add quick note
Contact	Email and phone (copy buttons)
Follow-up	Priority, next action, next follow-up date — save updates attention scoring
Attention	Score and reasons (collapsible)
Sources and tags	Source badges, tag pills, source record summary (collapsible)
Recent activity	Last activity timestamp and summary (collapsible)

Follow-up edits use the same fields as Client 360 and affect filters (Overdue, Due today, No next action).

Duplicates tab

- Groups by normalized **email** or **phone**
- Compare status, sources, assignments, activity, deals
- **Open all** — all clients in group in new tabs
- **Merge** — pairwise merge; see §7

Attention score factors

New lead with no activity, missing contact info, unassigned, no source record, recent source update, duplicate email/phone, 7+ days no activity, nurturing 30+ days, overdue/today follow-up, no next action on new leads.

6. Merging selected leads (inbox)

Use this when you want to combine **2 to 10** leads you selected in the **Inbox** tab (not limited to automatic duplicate groups).

1. In the inbox, select **2–10** leads using the row checkboxes.
2. Click **Merge selected** in the bottom bulk-action bar.
3. **Step 1 — Surviving record:** Choose which lead stays active (canonical). All other selected leads will be archived after their data is moved.
4. **Step 2 — Final client data:** For each field, choose a value from one of the selected records, **Blank**, or **Custom** (type your own text). **Name is required** — you cannot continue without a final name.
5. **Step 3 — Review:** Confirm surviving record, records to be archived, and final field values. Optionally enter a **reason**. Check **I understand the other selected records will be archived**.
6. Click **Merge clients**.

What happens

- All non-surviving selected leads are set to **Archived**.
- Interactions, deals, tasks, documents, activity logs, source records, tags, and assignments move to the surviving client (with role limits and conflict logging).
- One **merge audit** row is written per archived lead.
- The inbox refreshes after a successful merge.

Tips

- Review deals and relationship owners before merging large groups.
 - You can also start a multi-lead merge from **Client 360** → **More actions** → **Merge clients** (search and add related records there).
-

7. Merging duplicate clients (Duplicates tab)

For email/phone duplicate **groups** detected automatically:

1. **Duplicates** tab → **Merge** on a group (2+ clients).
2. Choose **canonical client** (keep).
3. Choose **duplicate client** (will be archived).
4. Under **Final client data**, for each field pick a value from either client, **Blank**, or **Custom** (type a new value). **Name is required**.
5. Optionally enter a **reason**.
6. Type the **duplicate client's name** to confirm.
7. Click **Merge clients**.

What happens

- Interactions, deals, tasks, documents, activity logs, strategies, and most source records move to canonical.
- Assignments merge with deduplication (role limits enforced; conflicts logged).
- Duplicate set to **Archived**.
- System note and **merge audit** record created.

Warnings

- Multiple relationship owners may cause assignment conflicts.
- Won deals on both clients affect commission—review before merging.

8. Client 360 (super admin)

Route: `/clients/[id]`

Super admins have **full access** on every client.

Header (admin-only)

Action	Detail
More actions menu	Merge clients (multi-record picker) · Archive client
Pipeline dropdown	Set any stage immediately

Merge clients opens a search picker to add related records, then the same multi-step merge wizard as inbox **Merge selected** (§6).

Full edit rights

- Client details, deals, strategy, tasks, interactions
- Team assignments (relationship and follow-up only at client level; see below)
- Document upload and delete
- All pipeline stages without role restrictions

Strategy Planner — Timeline Economics: On Client 360 → **Strategy Planner**, strategy items support investment amount, start/end year, income amount/frequency and income years, plus capital returned / capital return year. Expenses support amount/frequency and start/end year. Board and List cards show compact illustrative totals (total income, total expense, capital back, illustrative position). Helpers use MONTHLY×12, YEARLY as-is, ONE_TIME in the start year, and inclusive year ranges — **no** growth, compounding, IRR, ROI, yield, or guaranteed returns.

Strategy Planner — Projection Journey: Projection Journey is designed for manually selected milestone years and scenarios. It does not generate a full year-by-year projection. Use it to present important points in the client's investment journey, such as the initial investment, income checkpoints, exit scenarios, and total asset position. When editing a milestone, advisors can select contributing strategy items and expenses, review suggested values, and click **Use suggested values** to apply them (suggestions are not auto-applied). Saved values remain manually controlled. Open Client 360 → **Strategy Planner** → plan → **Projection**.

Client Strategy Overview (read-only report): Open Client 360 → **Strategy Planner** → open a plan → **View client overview**. Presents a client-facing strategy map (yearly spending/earning/net, cumulatives, capital returned, illustrative total position, and contribution chips), summary cards, perks, and disclaimer at `/clients/[id]/strategy-plans/[planId]/overview`. View permission only — editing stays in Board / List / Projection. Values are illustrative and based on advisor-entered assumptions; no automatic year-by-year projection. Browser **Print** only (no built-in PDF or share link). ← **Back to Strategy Planner** returns to the workspace tab.

Client team management (Assigned Team widget)

Use **Assigned Team** on Client 360 to set the **client-level** team. These roles seed deal templates but commission splits are configured **per deal**.

Role	Max per client	How to assign
Relationship Officer	1	Assign → Relationship Officer
Follow-up Officer	1	Assign → Follow-up Officer (Account Service)
Doctor	—	Not assignable at client level for new operations

Doctors are added to deals, not the client team. Legacy client-level doctor rows may still appear in a collapsed **Legacy doctor assignments** section for audit only.

When you apply a deal template, relationship and follow-up users are pre-filled from the client team when possible.

Deal creation and participants

Open **Deal Info** on Client 360 → **Add Deal** or **Edit** on an existing deal.

Step 1 — Deal basics

- **Name, Deal Value, Total Commission, Status**
- **Deal Type** — Marketing, Investment, Medical, or Custom

Changing deal type does **not** automatically overwrite participants. Use **Apply {type} template** when you want template percentages.

Step 2 — Apply commission template (optional)

Click **Apply Marketing template** (or Investment / Medical / Custom). If participants already exist, confirm replacing current percentages.

Templates preserve relationship, follow-up, and doctor **users** where possible when re-applied.

Step 3 — Add or edit participants

Use quick-add buttons or edit rows in the participant table:

Button	Adds row for
+ Relationship	Relationship Officer
+ Follow-up	Follow-up Officer
+ Doctor	Doctor (internal user)
+ External partner	Vendor / marketing partner (external name)
+ PPA	Company row (Profit Pulse Ally)

- **Internal rows** (Relationship, Follow-up, Doctor) — pick a user from the searchable dropdown (active users).
- **External rows** (PPA, External partner) — enter or accept the external name. PPA defaults to *Profit Pulse Ally*.

Step 4 — Split doctor pool (multiple doctors)

When two or more doctor rows exist, click **Split doctor pool evenly** to divide the template doctor percent across them (e.g. 60% → 30% + 30%).

Step 5 — Validate total 100%

The modal shows **Total: X%**:

Status	Proposed deal	Won deal
Total $\neq$ 100%	Can save (warning)	Cannot save — must total 100%
Total = 100%	Green	Required to mark Won

Deal type examples (on \$10,000 total commission)

Marketing deal

Participant	%	Amount
PPA (Company)	15	\$1,500
Relationship Officer	5	\$500
External Partner	80	\$8,000
Follow-up Officer	0	\$0

Investment deal (two doctors — 60% split evenly)

Participant	%	Amount
Relationship Officer	10	\$1,000
Follow-up Officer	10	\$1,000
PPA (Company)	20	\$2,000
Doctor A	30	\$3,000
Doctor B	30	\$3,000

Medical deal (one doctor)

Participant	%	Amount
Relationship Officer	10	\$1,000
Follow-up Officer	10	\$1,000
PPA (Company)	20	\$2,000
Doctor	60	\$6,000

Doctor returnables (on WON deals)

For each **Doctor** participant row in Deal Edit:

1. Check **Returnable required**
2. Enter **Returnable % of commission** and/or **Fixed returnable amount** (fixed overrides %)
3. Save the deal as **Won**

Returnables are generated for qualifying doctor participants when the deal is marked **Won**. Backfilled deals do not auto-configure returnables — set them per deal.

Archive / delete modal

Tab	Confirmation	Result
Archive	Type client name	Status → Archived; data retained
Permanently delete	Client name + your admin password	Irreversible; redirects to master pipeline

Un-archive: Set status back via pipeline dropdown (no dedicated un-archive button).

9. User management

Route: /admin/users

Action	Steps
Deactivate	User menu → Deactivate → type name → confirm. Blocks login.
Permanently delete	User menu → Delete → type name + admin password → confirm.

You **cannot** deactivate or delete your own account. No in-app reactivate—requires database intervention.

10. Global reconciliation

Route: /admin/reconciliation

Audit **all** commission returnables organization-wide.

- Filter by user, status (Unpaid/Paid), period
- Review returnables **per deal** — each row links to the source WON deal and client

- Compare doctor participant returnable config on Client 360 **Deal Info** with amounts shown here before marking paid
- Counterpart to **My Statements** (per-doctor self-service)

Typical review flow

1. Filter **Unpaid** for the current period.
2. Open the linked client/deal from a returnable row.
3. Confirm doctor participant rows, commission %, and **Returnable required** settings match policy.
4. After payment, doctors mark their own rows paid in **My Statements**; use reconciliation to verify org-wide totals.

11. Commission reference

Deal-level participants (current model)

Commission splits live on **DealParticipant** rows per deal. Client-level doctor assignments are legacy only.

Deal type	Default template (%)
Marketing	PPA 15 · Relationship 5 · External partner 80 · Follow-up 0
Investment	PPA 20 · Relationship 10 · Follow-up 10 · Doctors 60 (split evenly)
Medical	PPA 20 · Relationship 10 · Follow-up 10 · Doctor 60
Custom	Same starting point as Investment/Medical until edited

Secured commission (dashboards) sums each user's participant rows on WON deals.

Company earnings (admin KPI) sums **PPA / COMPANY** participant rows—not a flat 20% when participants exist.

Legacy pools (deals without participants)

Pool	Rate
Doctor	60%
Relationship	10%
Account Service	10%
Company overhead	20%

Used only when a deal has no participant rows (until backfill). See `docs/deal-participant-migration.md` for migration steps.

Returnables

- Generated when deal → **Won**
- **Participant-backed deals**: one returnable per doctor participant with **Returnable required** + returnable % or fixed amount
- **Legacy deals** (no deal participants): still use client doctor assignments and the historical formula
- Backfill does **not** infer doctor returnables — set them per deal in Deal Edit after `npm run backfill:deal-participants`
- Assignment changes trigger background recalculation (legacy deals only)
- Super admin audits per deal via **Reconciliation** (§10); doctors mark own as paid in My Statements

12. Lead ingestion (automated)

Source	Endpoint	Match order
Google Forms	Webhook	source+externalId → email → phone
Profit Pulse Ally	Member webhook	same
Manual	Admin add / dashboard add	—

Creates **New Lead** + source record + system log on create; safe merge on update (no status downgrade).

View source history on Client 360 **Lead Source Records** widget and in LCC preview.

13. Command palette

Shortcut: `⌘K` / `Ctrl+K`

- Search **all** non-archived clients (up to 10 results)
- Shows status, sources, attention score and reasons
- Enter or click → Client 360

14. Tags

Action	Where
Create tags	Lead Command Center bulk tags (inline) or <code>POST /api/admin/tags</code>
Assign	LCC bulk Add tags
Filter	LCC inbox tag chips
Remove from client	API only (<code>DELETE /api/clients/[id]/tags/[tagId]</code>)—no Client 360 tag UI yet

15. Daily workflow (recommended)

1. **Lead Command Center** → use **Attention** or **Follow-up** presets; open **Filters** for advanced triage.
2. **Preview** leads in the drawer; update follow-up fields without leaving the inbox.
3. Bulk assign relationship owners and tags; **Merge selected** when you have 2–10 related leads to combine.
4. **Duplicates** tab → merge confirmed duplicate groups (§7).
5. **Admin dashboard** → review pipeline and KPIs.
6. **Client 360** → relationship/follow-up assignments, deals & participants, merge, archive, stage changes as needed.
7. **Reconciliation** → review unpaid returnables per deal after WON deals are configured.

16. Troubleshooting

Problem	What to try
"Failed to load leads"	Sign out and sign in; hard refresh; check error status code
Inbox shows Prisma/schema error	Run <code>npm run dev</code> (regenerates Prisma client) or <code>npx prisma generate</code> then restart dev server
Merge disabled in inbox	Select between 2 and 10 leads inclusive
Merge name required	Set a final Name in step 2 (Custom is allowed)
Merge assignment conflicts	Review relationship occupancy; resolve manually before merge
Analytics stale	Funnel/KPIs cache ~10 min—wait or refresh
Won deal won't save	Participant percentages must total 100% when status is Won
Company earnings looks wrong	Check PPA participant % on deal (Marketing = 15%, not 20%)
No returnables after Won	Doctor row needs Returnable required + % or fixed amount
User cannot sign in after deactivate	Expected—reactivate requires DB change

17. Keyboard shortcuts

Shortcut	Action
⌘K / Ctrl+K	Command palette
Esc	Close palette / modals
↑↓ + Enter	Navigate palette

18. Admin route reference

Route	Purpose
/admin	Dashboard
/admin/leads	Lead Command Center
/admin/users	User management
/admin/reconciliation	Commission audit
/clients/[id]	Client 360
/dashboard/settings	Account settings (display name, display density)

Profit Pulse Ally CRM · Super Admin Manual · For assignee day-to-day workflows see the Standard User Manual.
